Matthew Lalanne, Product Designer

matthewlalanne.com | linkedin.com/in/matthewlalanne

Product designer with four years at Charter Communications (Spectrum). I co-lead the corporate website redesign, built the component system behind it, and present design direction directly to EVP and GVP stakeholders. Before that I designed the internal tools Spectrum's agents use on live calls. I use AI for large-scale audits and research synthesis and check its output before anyone relies on it, and on the side I built an iOS and Android fantasy league app for reality TV.

EXPERIENCE

Product Designer | Charter Communications

Aug 2022 to present

Corporate website redesign and V2 component system

2025 to present

- Co-lead the redesign of Charter's corporate website with one other designer: page design, responsive specs, developer handoff and authoring guides.
- Built the V2 component system every legacy page is now converted to, so new pages are assembled from documented components.
- Present design direction to EVP, GVP and director stakeholders and turn their feedback into decisions the team can ship.
- Co-lead the Unified Website initiative: IA strategy and navigation to bring the corporate, policy, investor and careers sites together.

Design operations and AI

2025 to present

- Built a four-agent audit pipeline on the Figma REST API that reviewed hundreds of files across two dozen projects and produced a leadership report on standardization. Spot-checked results against source files before the team used them.

Multi-Tenant Sales

Jan 2024 to Jan 2025

- Led design to bring a vendor-run referral and incentive platform in-house for sales reps and leasing agents across thousands of properties, with product, development and accessibility reviewing every sprint.
- Added duplicate-agent detection and in-tool gift card issuance, removing the vendor and its per-reward fees.

Competitive Edge

Nov 2022 to May 2023

- Redesigned the offer comparison tool inside AgentOS after research showed agents had stopped trusting its numbers. Three rounds of usability testing took time-to-offer from over two minutes to 43 seconds and satisfaction from 3.6 to 6.7 out of 7.

Founder and Product Designer | Last Chair Studio

2026 to present

- Designed and released Reality Check, an iOS and Android fantasy league app for reality TV, from rules and data model through screens, builds and release.
- Claude Code writes the code; I review every build on device before anyone else gets it, and ship small updates weekly from the league's feedback.
- 40 players across four leagues use it every week. App Store release is next.
